

Autonomous Vehicle Safety & Compliance Report

1. Functional Safety Architecture

The drive-by-wire system achieved ISO 26262 ASIL-D certification across steering and braking modules.

Redundant emergency stopping controllers operate on independent microcontroller silicon.

Simulation & Real-World Disengagements

2. Disengagement Metrics

Real-world road testing logged 1.2 million autonomous miles with a disengagement rate of 0.18 per 1,000 miles.

Virtual testing validated 25 million simulated miles against edge-case scenario libraries.
