

Cardiovascular Efficacy Clinical Trial Summary

1. Study Parameters

The study evaluated Cardiovox (CV-200) versus standard of care in 850 patients diagnosed with severe hypertension.

Patients were monitored over a 24-week primary evaluation period with blood pressure readings taken twice daily.

Clinical Efficacy & Primary Outcomes

2. Blood Pressure Reduction

Mean systolic blood pressure reduction in the Cardiovox arm was 18.6 mmHg compared to 8.2 mmHg in the control arm ($p = 0.002$).

Diastolic reduction averaged 11.4 mmHg in the active cohort with no reports of secondary postural hypotension.
